

SOFTBLOCK

Evidence Protection Software

SoftBlock is the premier **write-blocking software for Mac** systems. Because it is installed as a **low-level kernel extension**, SoftBlock runs silently in the background, **protecting evidentiary data** and allowing forensic professionals to focus on their casework.

- * Quickly **mount, write-protect,** and **manage** multiple devices simultaneously for full control of triage, imaging, and data collection
- * Reduce the need for cumbersome write-blocking hardware, instead relying on SoftBlock's **kernel-level data protection**

- * Prevent accidental data writes to evidentiary devices with SoftBlock's **"Always On" protection** and **double-confirmation** features
- * Focus on your casework while SoftBlock **eliminates common write-blocking issues** with firmware updates and port management
